

# ANGULAR CONTACT BEARINGS

NBC manufactures light duty Angular Contact Bearings in configurations that allow for a wide variety of designs and applications requiring combined radial and thrust loads. These top quality and economically priced parts are designed for use in applications with dimensioned holes and recesses, plastic and metal tubes, shafts or axles. They work well virtually anywhere that allows for thrust pre-loading of their inner and outer components. Longer life is attained through the use of case hardened inner components. The soft outer shell helps provide a "press-like" fit in non-precision holes or recesses of the mating part.

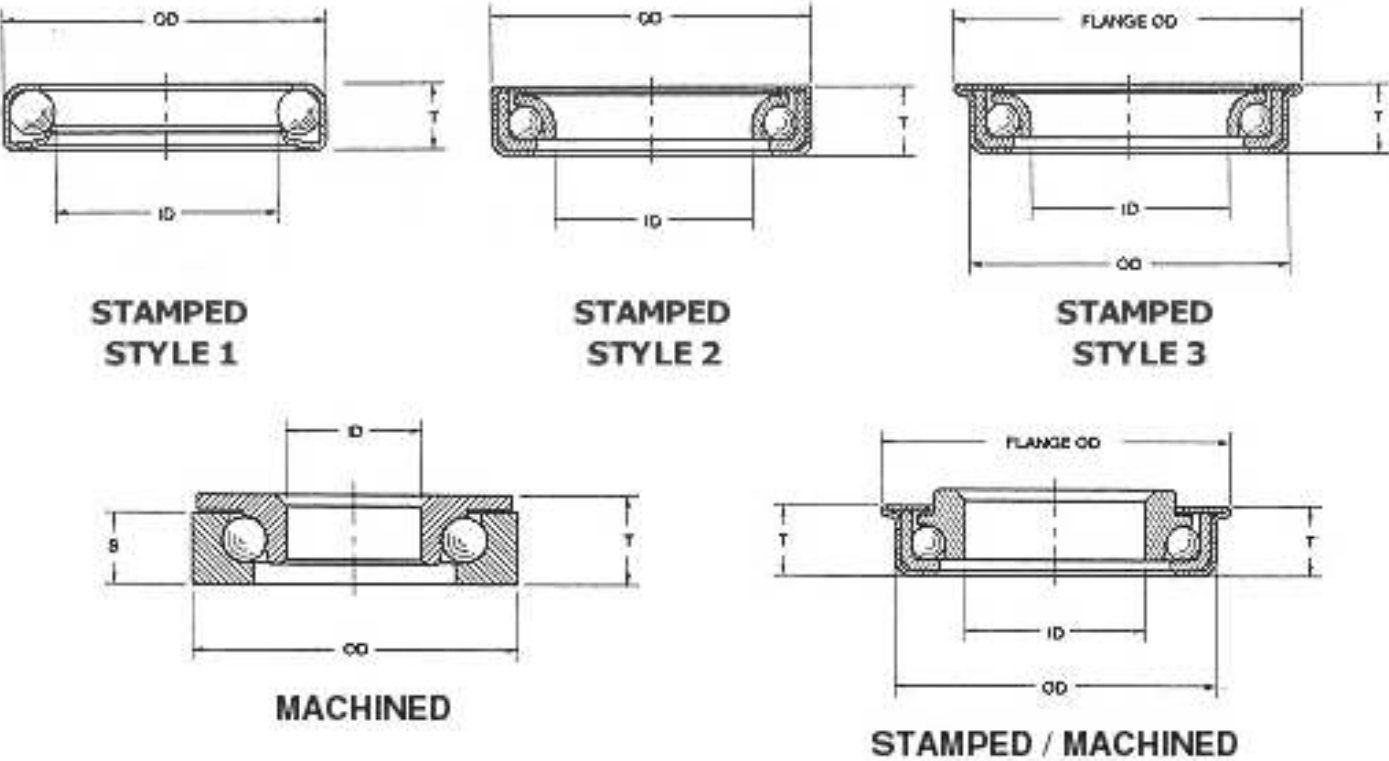

**Applications**

Some of the applications using these bearings include wheeled devices, power tools, automotive seat adjusters, conveyers, swivels, idler pulleys, trailer jacks, counter top appliances, and food processing equipment. They are widely used throughout OEM, Industrial, Commercial, Residential, and After Market

**Optional Specifications**

Optional specifications for these products include lubrication, plated finishes, alternative materials and a variety of ball grades and types. NBC is professionally staffed to help you with your design requirements. Our specialty is offering you the opportunity for a custom-designed bearing made specifically for your
